[The Memphis Pyramid](#), the Pyramid was originally around 52 meters high and had a base of approximately 78 meters. However, much of the pyramid has been eroded or destroyed over time, and today it stands at around 15 meters high.

The Memphis Pyramid differs from other significant pyramids in Egypt in that it was not constructed using massive, accurately-shaped stone blocks. Rather, it was erected using mud bricks that were later coated with limestone. This is a contributing factor as to why the pyramid has not endured as effectively as its counterparts at Giza and elsewhere in Egypt.
